PROJECTS

- **Inspire Uplift**

Create integrations with Magento, Shopify, woo commerce, Wix.

Create modules unit/feature tests.

Create REST Apis for the front-end.

Create algorithms for Boughttogether products recommendation and trending Products.

- **Bakery ERP**

<http://raheemsw.com/admin/public/>

It is a Bakery point of sale and management system. It has several Modules like Sale, Purchase, Inventory, Ledgers, Income Reports, Employees management Etc. It is created using Laravel. There are several other projects like this with the addition of different modules. These projects are

1. Rice Trading

URL: <https://razaprinters.com/custom/public>

2. Peshawar Traders

URL: <https://razaprinters.com/peshawer/public>

- **Construction ERP**

It is a point of sale project. It has multiple modules like Purchase, Sale, Inventory, Income reports, ledgers, Attendances Etc. It is created using Laravel.

- **Solar Market Egypt**

It is an implementation of an online store for solar systems using Laravel. It has 3 users Customer, moderator, and Admin. Admin has access to the whole system, while moderator has access to backend with limited functionality like creating products etc. The customer has access to the front-end only. The site has also blog functionality within.

URL: <https://design.solarmarketegypt.com>

- **Commish**

It is an implementation of an accounts system for a loan company using Php/Laravel. It allows users to create/manage functionalities related to loan systems like providing loans to customers and calculating commission for the broker and other parties involved in the process. Other than that it has reports like profit/loss, commissions etc.

URL: <https://commish.mkhurram.online/v2/public>

- **Invoice Generator**

It is an implementation of an invoice generator using Php/Laravel. It allows users to enter details of invoice data into the form and It will generate invoices according to the given data with auto calculations like taxes, VAT, etc. User can re-generate the same invoice whenever he/she wants as data getting stored in DB.

- **Property Management System**

It is a Property Management System developed using PHP programming language. It has Multiple modules like Employees Management, Property Sale/Purchase, Rent Building/Apartments on installments Etc.

- **School Management System**

It is a School Management System implemented in Laravel. It has multiple modules like Student management, Attendance module, etc.

- **SCLSV Limousine Service**

It is a backend system for sclsv limousine services. It allows drivers to submit their daily travel history with other details like requirements of cars etc. It also allows users to generate data in form of CSV. Only admin can generate other users' data but others only generate their own data.

- **Email Scheduler**

It is an implementation of a scheduler using Php. It sends email to specify customers of an online store who order 3 days ago and 10 days ago from current date. It fetches emails from that specific dates and sends emails using SendGrid which is also implemented using Php.
